Casing Spacers Non-Metallic HDPE with wheel runners "No metal parts"
 Electrical Isolation non-conductive wheel runner skids

Casing spacers are used to hold a carrier pipe in position through a casing pipe. They may be used in a regular casing or a split casing. Casing spacers are used for pipe/casing under railway crossing, road crossing and other applications.

Casing Spacers with wheel runner provide low profile support legs for slippiling pipe through pipe. Protective end sealing for all pipe profiles are available.

Models available

Casing Spacers WA-BR model for small diameter pipes.

Casing spacers with integrated roller wheels result in less friction. Max. Static load for BR-models is 200 KG per spacer. (441lb per leg) Wheel runners provide a smooth transition across welding beads or other minor imperfections.

WA-BR models fit 32 - 173 mm diameter OD pipes. Skid heights available are 15, 25, 35, 45 mm lengths.

Casing Spacers WA-TR models:

Designed for pipe diameters 151mm to 414mm OD. Leg heights available are 30 mm - 50mm - 70mm – 90. Operating temperature: from -20 to 80 C / (- 4F to 176F).

Each TR casing space supports a maximum static load of 1573lb / 700kg per spacer.

Casing spacers WA-ZR models

Designed for use for Pipe diameters 310 to 800 mm OD. Leg: 35, 60, 90 mm.

ZR casing spacers support a maximum load on each spacer of - 1500kg / 3372 lb.

Casing Spacers WA-DUO models

Large diameter pipe models, support up to 7000 lb weight per spacer. Tough DUO HDPE casing spacers with non-metallic roller wheels provide dielectric isolation between the pipe and casing.

Leg Height mm: 32, 50, 70, 100, 160 
Inches 1.25", 2.00", 2.75", 4.00", 6.30"

Casing Spacers with wheel skids carry the load allowing insert forces to be reduced.
