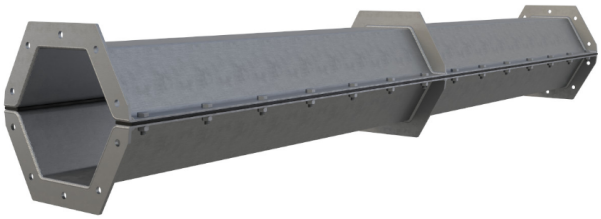
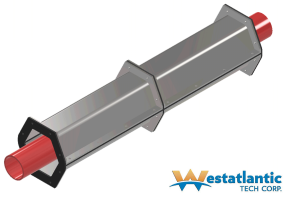
HEX SPLIT CASING PIPES - PROTECTION FOR EXISTING PIPELINES

Split Casing Pipe for pipe diameters 5 to 48 inch



Hexagonal split casing pipe.
Fits all American and international pipe sizes.

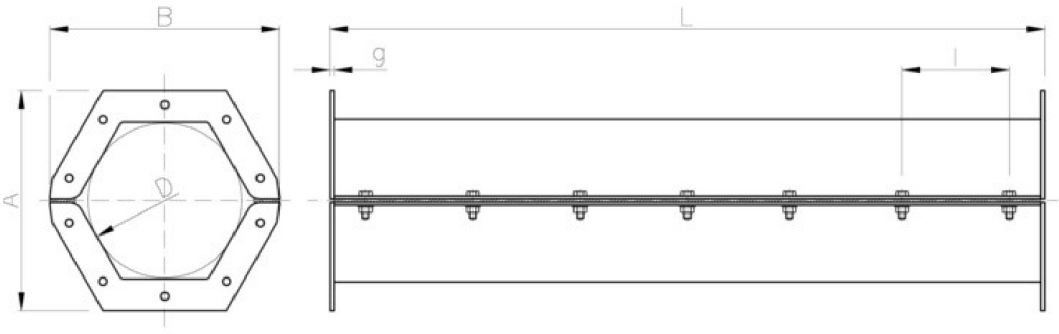


Split Bolted WA-HEX split casing are designed for protection of existing pipelines. They protect existing pipelines that run under roads, railways under buildings and other applications. Steel split casings may be further protected with anti-corrosion powder coatings, galvanized or shop coatings.

Four inch and up are fabricated in various lengths, with shipping and on site handling considered. Individual sections are connected using bolt together end flanges connections and axial joints are bolt connected. Pipe positioners (Spacers) wrap around the carrier pipes and hold the pipe off the bottom of the casing.

SPLIT CASING LENGTHS DEPEND ON THE SIZE REQUIRED

PLACEMENT WEIGHTS AND SHIPPING LENGTHS
ARE CONSIDERED IN THE DETERMINATION



Pipelines remain in service while hexagonal split casings are installed.

Easy to handle sections are assembled and bolted together at the job site. Casing Spacers support the pipe in the casing. Rib flanges around the split casing provide stability and strength, using lighter materials.

Casing ends may be left open or sealed. Seals may be EDPM for water applications or NBR elastomer for oil and gas applications.
