Two piece seals for multi conduit sealing and Liner seal

WA-GP-F seals are a two system seal for sealing both conduit and pipe penetrations through a building wall and also seals the waterproof liner.

The penetrations may go through a core drill open or through a wall sleeve. The inner seal makes a watertight penetration for the pipe or pipes, the outer compression plate clamps the liner making a complete membrane and pipe water tight connection.

The WA-GP-F seal element may be EDPM, NBR or Silicone, the compression plates are stainless steel , 304L or 316L. Sealing up to 36 psi or greater is accomplished.

The seal allows for multi pipe/conduit through the same opening.

Watertight Gas tight.
