Cement-coated wall sleeves
A special coating creates a homogeneous bond with the concrete

1. Attach end plate to the wall form at Pipe penetration point.

2. Cut sleeve to correct length and secure between the forms. So does not move with concrete placement.

3. Pour Concrete around the sleeve; vibrate concrete to insure full cover.

4. Remove forms, re-insert end plates in the sleeve to insure no debris enters the sleeve, remove end plates for pipe passage.

Watertight up to 72 psi (5 bar)
